AMOBILE FACILITATES THE EFFICIENCY OF ON-STREET PARKING CHARGE

Customer Challenge
A prominent Taiwan government contractor of on-street parking fee collecting was looking for a better solution for their current field operations to achieve effective parking management. Apart from becoming full of dirt, Traffic wardens need to carry mobile devices that work in extreme weather conditions such as under rain and areas with high exposure to sunlight. It is crucial for these devices to be rugged, weatherproof, stable, and reliable, as well as possessing auto-identification functionality.

AMobile Solution
The customer finally chose the AMobile GT-500, an ultra-rugged handheld parking charge machine, over other mobility brands in the market on account of its incredible advantages. Comprising ruggedness with IP-67 rating to the toughest environments, a 4800mAh battery capacity to work up to 8 hrs, wireless communication for multi-data connectivity, big data storage, a 1D/2D barcode reader, and a 13M high-resolution camera with auto-focus and night vision, the GT-500 could do everything the customer wanted plus more.

Future Opportunity
With the rise of consumers purchasing connected devices, the next step is considering the adoption of a mobile devices management solution. AMobile Node-Watch is a unified cloud service utilizing industry standard management protocols and intuitive online dashboards that allows every device to be found and tracked quickly and easily. In addition, each device can be monitored and managed securely from the control center to significantly enhance efficiency for ultimate on-street parking management.

Prominent Taiwan Government Contractor Achieving Ultimate Parking Management

On-Street parking bills written by traffic wardens earn a lot of labor costs not just in time spent writing the bills but also in the time entering the bill information later into an electronic database. Thus, people can easily pay their bills online or in convenience stores, etc. Utilizing connected devices with thermal printers to issue parking bills has been used by on-street parking administrators to improve the work efficiency of parking management and decrease the total cost of ownership.
